FOREWORD

The 2023 Annual Report continues to document and further affirm my vision for continues improvement, effective leadership and the quest for good governance and sustainable development of the Asafo Community - development that is people centered and which promotes transparency, accountability and eschews intergenerational equity. Restoration of the Asafo community and the dignity of its people remains an important cornerstone of the work of the Akwamu Divisional Council which I lead.

We will strive to ensure that all manner of the people, irrespective of creed, gender, and status, receive fair, timely and just treatment in line with what the psalmist talks about regarding God's statement to earthly rulers about justice, and here I quote:

"How long will you judge unjustly and show partiality to the wicked?... Give justice to the weak and the fatherless, maintain the right of the afflicted and the destitute. Rescue the weak and the needy; deliver them from the hand of the wicked" (Ps. 82: 2 – 4).

As usual the 2023 Annual Report covers the major activities and events that the division participated in. I hope all stakeholders will find this year's report informative. We welcome any feedback that will assist us in improving both the qualitative and quantitative data and information provided herein.

I hope the 2023 Annual Report inspires many that read it.

4.0 LAND ALLOCATION

4.1 Akwamu Stool Lands Management System (AKSLMS)

The Akwamu Stool Lands Management System is a software developed by the Asafohene/Akwamuhene to help with the effective management and allocation of lands/plots within the Asafo Communities.

It is an effective land management tool designed principally to avoid double “sale” and allocation of lands/plots within the Asafo Communities with the view to eliminating land disputes which has bedeviled the institution of chieftaincy. The software has a user interface and an operation phase once logged in. It recognizes two main users, i.e. the Administrator and the Office staff (user). The Administrator is the Super User who creates new users and assign them with user names, passwords (which needs to be changed at the first time the user logs into the system), and the duration a user is allowed to use the application. The Supper User can at any time deactivates the user(s).

Figures 1 and 2 show the landing/home and the operational pages respectively. Users log in with the username and passwords and depending on the user rights can perform lands/plots allocations or have an overview of allocated lands/plots.

By signing into the AKSLMS, the user can create a subfolder for an allottee after entering the required information about the land/plot. Land/plot allottees are to provide the following information to users of the AKSLMS before an allocation can be generated by the software:

- Name of Allottee
- Information on the intended use of land
- Cadastral site plan which has detailed information on the coordinates of the land/plot
- Mother allocation from the appropriate Asafo Community Head
- A passport photo
- Ghana card or other valid national identification card, e.g. passport
- Digital address (GPS)
- Receipt of payment of allocation administrative fees
- Telephone number/email address

One additional information required before a plot of land is allocated is the land inspection certificate (LIS). The land inspection certificate is issued by the Land Coordinator of the Office of Stool Lands at Asafo Ahenfie. Upon receipt of the site plan from the allottee, the Land Coordinator and his staff (Land Inspectors) do a filed visit to ensure that the land for which an allocation paper is being sought for is valid and that the plot has been duly assigned to the allottee by the appropriate Asafo Community Head.

All the above documents are scanned as appropriate and uploaded into the AKSLMS system before a user can generate the allocation letter. The AKSLMS checks that the above documents are uploaded, and the coordinates of the plot/land are rightly keyed into the system. Once done the software automatically generates and issues a unique identification (ID) number to the plot of land (prefixed AKLS.....), and send an email to the Super User with the allocation letter attached to the email. These automatic processes are unknown to the user and hence not managed by him/her. The Super User then prints, signs and appends a seal to the allocation letter before the Community Head counter signs.

We envisage to release a new version of this software early 2024 with improved user experience, including a better and more intuitive user interface.
